

NoxVault

Fast Asset Management

Locate Assets and Documents, Instantly.

Inventory 1,000 items in about one minute.

NoxVault records the status and location of your assets using RFID (Radio Frequency Identification). Once your assets have been tagged with an RFID chip, simply hold the NoxVault trigger to scan entire shelves or rooms and update the last known location of each of your assets.

Asset Tracking made simple:

- 1) Select the RFID tag appropriate for your asset.
- 2) Apply the tag to your asset and record its ID in your Excel spreadsheet - you can use custom columns and track any additional information you wish.
- 3) Take inventory with Nox Vault. Nox Vault updates your spreadsheet with the last seen date/time.

An **Inventory Report** tells you which items were not updated on the latest inventory so you can decide if they are missing or just overlooked.

Locating items is easy: Tell Nox Vault the item you are looking for and Nox will beep faster/slower to narrow down the search. Great for locating files in cabinets or desk drawers.

Manage 50,000 items per location. Create multiple location files for unlimited item tracking capability.

Nox Vault

Nox-tm4 On-Metal Tag
IP68 rated to 400F

Nox-1 High Performance Tag for most assets and documents

NoxVault Features

UHF Generation 2 RFID reader, 20' range

1 and 2-Dimensional barcode scanner
